

ABSTRACT OF THE DISCLOSURE

In order to provide an information security policy evaluation system in which information security policies can be efficiently and appropriately defined and operated in an organization, such as a corporation, treated threats operated on a second site 102 are transmitted from a second information processing apparatus 112 on the second site 102 to a first information processing apparatus 111 on a first site 101, threat information is transmitted from a third site 103 collecting information on threats to the first information processing apparatus 111 on the first site 101. The first information processing apparatus 111 extracts treated threats which have been effective for threats having occurred actually, and untreated threats, out of the received treated threat and generates an evaluation report in which these are described. Moreover, a compensation amount of insurance against threats is changed based on the generated evaluation report.
